Last year, Aaron Sanchez was coming off the best season of his career and seemed ready to step into the ace role (not the mascot) for the Blue Jays. Then, bubbles. Yes, when you heard it many times last year, a bubble caused a problem that kept him out of rotation for most of last season. A lot of people criticized Sanchez, comparing him to other injuries played by athletes, but he missed the whole year because of the bubbles. This has always been a performance issue for the blisters pitcher, no doubt hurting Sanchez because there were ridiculous comparisons. Blue Jays blogger Ian Hunter found a clip with photo evidence, further explaining the problem. WARNING: Below are some graphic images. If you don't want to watch the feature, you can see some of the pictures below. They look painful. As Sanchez pointed out in this feature, all these bubble problems led him to over-correct the launch motion and tore the ligament in his finger. Luckily, he's totally ready to go this season and his finger seems to be looking completely back to normal. \$Signed January 2019, he signed a one-year, \$3.9 million contract with the Blue Jays. He was traded to the Astros in July 2019. Waived by the Astros in December 2019. Last featuring Aaron Articles Articles 129 days ago Jason Collette analyzes the impact of the unique program starting pitching and profiles pitchers that have hidden value in the new 2020 landscape, including Jeff Samardzija. 162 days ago Todd Zola washes list management trends from last season's NFBC Main Event and notes that Lucas Giolito was a poster boy for exercising patience. 187 days ago Todd Zola continues his dump of last year's NFBC Main Event rosters and explains why he thinks Christian Yelich has come to so few league-winning rosters. 228 days ago the FAAB may not be running yet, but Erik Siegrist looks at AL players and list situations worth discussing in the meantime, such as Danny Duffy of Kansas City. 231 days ago, David Regan analyzed players from injuries that could have been good bets to hide in goalie leagues, including Chicago's Carlos Rodon. His injuries hurt Sanchez for the second season in a row and he has been limited to just 20 starts in 2018. He did not find consistent success on the mound, ending with the gaudy whip for the second season in a row. Sanchez will inevitably be a believer in the 2019 drafts and auctions as he is one of the league's most influential pitchers in 2016. However, for as good as Sanchez is healthy and can look at his game, the strikeouts have never really been there. Even during the 2016 season, when he posted a 3.00 ERA, he had a strike rate of only 20.4%. His control has been a mess the last two seasons and the division is packed with tough opponents and batsman-friendly ballparks. In short, Sanchez should first be seen as a late round dart. It was a disappointing 2017 season for Sanchez, as the right-back made only eight appearances due to a recurring blistering problem. His last appearance came in mid-July and during the year he posted a 4.25 ERA and 1.72 WHIP; Sanchez couldn't get into any groove. This followed the 2016 campaign, in which Sanchez recorded a 3.00 ERA from 192 shots and a 3.00 ERA, mostly with peripherals to back up (7.6 K/9, 3.0 BB/9, 0.70 HR/9). He didn't make another pitch to the top tier of pitchers last season, but there is legitimate hope that he will get his form back after a full rest season, although there is no lock that the bubble epidemic will disappear. Provided health, 25-year-old Marcus Stroman should slide to the front end of Toronto's rotation, just behind him. Few have seen Sanchez's 2016 campaign coming. In his first major league season, the 23-year-old released cy young caliber numbers, managed the AL in the ERA and earned a winning percentage (.882), while winning the league's ninth-best WHIP (1.17) and overall (15). The right-handed refined curveball proved to be the perfect complement to the elite fastball routinely in the mid-90s. Sanchez's biggest battle was his own organization. From the outs, the Jays announced that senior management would limit his innings and even to carry him to prison until the middle of the season. However, his unexpected dominance changed things and he wound up 192 regular-season innings daily with an average of 97.3 innings per start while notching 23 quality starts (tied for third in the AL) in 30 starts. Including the playoffs, the right-hander scored 203.2 frames. He looks ripe for regression, especially given that he shot 7.55 out per nine innings while walking just 2.95. These peripherals don't jive with such a low ERA and it seems risky even coming off a nearly 100-inning jump. Sanchez, who left the Toronto bullpen as a rookie in 2014, earned a place in the first rotation to start the 2015 season. He struggled in April, but was really turning around in May and June before a shoulder strain forced him onto the DL. On his return in late July, Sanchez was assigned to the bullpen when he became the team's setup man down the stretch. His overall numbers don't jump off the page, but Sanchez had a 2.39 ERA, 0.87 WHIP and .467 OPS to allow his 30 relief appearances. Sanchez is known for an electrical mix of pitches that allows him to hit out batters in a high clip, and he has shown an ability to better control his pitches in short sediters. Still, the team has not officially said whether Sanchez will be in the squad for 2016 or in the top 11. If relief keeps him in the bullpen of his proven success, he should continue to work as the primary setup man. Sanchez finally made an electric debut with the Blue Jays in 2014. The 6-foot-4 righty Double-A started the season in New Hampshire, where he continued to avoid about his poor control, as he walked 14 percent of the batter facing 66 innings. Sanchez was later promoted to triple-A Buffalo for a period of five weeks, and in late July he only rose to the majors where he worked as an assistant. The 22-year-old was a great player, sending in a 1.09 ERA and a .70 WHIP with 27 forwards in 33 innings. He also made three saves and joined Casey Janssen in an area closer to the moment of time. Sanchez's dominance as a major league injury and his struggle as a starter at the senior levels of minors are best teamed up to give confidence to the idea that he is profiled as a dominant near-long-term. For the start of 2015, he will take a look at the rotation following Marcus Stroman's loss to a torn ACL in March, with the return option available if he can't use his control in the extended role. Sanchez spent almost all of 2013 at High-A Dunedin batting 83.1 with a 3.34 ERA, 7.8 K/9 and 4.2 BB/9 as a shoulder injury cost him part of the season. The walking rate reflects improved control compared with 2011 and 2012, although still not very good. Meanwhile, After Sanchez sent 9.7 K/9 to Low-A Lansing in 2012, he was able to move above his strike totals to a higher level. Ready to open in 2014 in New Hampshire, Sanchez is considered a potential front-line starter for the Jays down the line, but it would be encouraging to see him miss bats again in a high clip in the Eastern League this season. Sanchez spent most of the 2012 season working as a starter at Low-A Lansing, balancing an impressive ability to miss bats (9.7 K/9) and record numerous outs (2.22 G/F) on the ground, mistakes made with control (5.1 BB/9). If his secondary shots don't improve as expected, Sanchez will have a fast ball big enough to succeed in transitioning to the auxiliary role late in the inning. Still only 20 years old, the Jays can't come to give Sanchez plenty of time to ning the command at the lower levels of minors, and it's possible he will return to the Midwest League to start 2013 before getting his first exposure to High-A. The tall, lanky (6'4, 190) righty flashes plus speed with an easy delivery and many scouts believe he has a very high upside. He needs to wok in control but held his own in 2011, hitting out 56 batters in 54.1 innings between the 18-year-old rookie and Low-A. Low A.
